Further to complicate the historic geography was the fact that the literary people, the monks and religious men, were Indian or Indian-minded for long periods, disinterested in mundane records, and following the custom, still evident among many Southeast Asia people today, of avoiding personal names, so that anonymity, obscurity and confused nomenclature veil the past even in such records as do exist. Many experiments in writing styles were developed among these isolated and complex peoples and often inscriptions made in them cannot be translated today. Because of the dispersal tendencies within the territories themselves and the lack of focus to the region as a whole, no great depositories of learning were established in Southeast Asia to gather and conserve the record of its past.

Population Changes

Broadly speaking, the region has been until recently one of very thin population and large patches of it still contain populations of remarkably low density. Direct evidence of densities are scanty for periods farther back than this century, yet it seems probable that the whole of Southeast Asia in 1800 contained only about ten million people, when the region was probably as thinly peopled in its most attractive areas as Upper Burma and Upper Siam, the least attractive and developed areas, are today; Malaya then contained about a quarter million people, Java about four million, Burma probably less than two million. It was, even at the end of the 18th century, a zone of labour shortage and the objective of the local princelings of the times was to get hands, the basic power resource of their time, the one way of securing a small surplus from their fundamentally subsistent territories. Outsiders were not greatly attracted to Southeast Asia itself, as apart from the routes through it. To Spain its old colony, the Philippines, was no great asset and more related to Mexico than to Spain, remote and ready to drop from the Spanish orbit during the 19th century. To Holland, its colony in Java was a company venture that yielded little direct profit for many years and was at times on the verge of bankruptcy.

But the last 150 years brought tremendous changes in population. First, on the heels of the Industrial Revolution in Europe, came a revival and an expanded volume of trade between the Indian Ocean and the Far East, a stream which threaded the seaways of
